

We believe that
ENERGY EFFICIENCY
is key to running our company.

We use energy resources efficiently.

We aim to use energy efficiently, and we incorporate this into the development and planning of our products and manufacturing processes, in production and right through to the transportation of our wheels. To achieve this, the RONAL GROUP has set the following goals:

- Reduce energy consumption and energy costs
- Make optimum use of energy in production
- Keep emissions to a minimum
- Obtain our energy supply – wherever possible and economically feasible – from renewable sources or our own production

How do we aim to achieve our goals?

- Measure and monitor our energy consumption and define economization and efficiency measures
- Establish energy benchmarks
- Assess our activities and continuously improve our energy savings
- Regularly communicate our consumption data and achievements to our employees and other stakeholders

Who is involved?

All employees of the RONAL GROUP, suppliers and customers – because we can only achieve success if everyone is actively committed.

We will achieve these goals together.

Yvo Schnarrenberger
CEO RONAL GROUP
October 2017
