
WE BELIEVE THAT ENERGY EFFICIENCY IS KEY TO RUNNING OUR COMPANY.

We use energy resources efficiently.

From the development and planning of our products and manufacturing processes, to production, right down to the transportation of our wheels – we use energy efficiently, meeting all relevant obligations and applicable requirements.

To achieve this, the RONAL GROUP has set the following goals:

- To continuously improve our energy performance as part of the PLANBLUE sustainability strategy
- To establish a strong sense of awareness in terms of the responsible utilization of energy at all functional levels
- Obtaining energy – wherever possible and economically feasible – from our own production

How do we aim to achieve our goals?

- Measuring and monitoring our energy performance by using energy performance key figures at the machine, process, plant, and group levels
- Taking account of static factors and relevant variables to increase the transparency, significance, and comparability of the key figures
- Defining measures to achieve our goals and energy targets within defined (multi-year) action plans

- Configuring, designing, and controlling systems and processes that take energy-related variables into consideration
- The economic use of machines and equipment with maximum energy efficiency
- Evaluating our actions, assessing risks and opportunities, and continuously developing our action plans
- Providing the required information, data quality, infrastructure, and resources

Who is involved?

All employees of the RONAL GROUP, suppliers, service providers, customers, and other interested parties – because we can only achieve success if everyone is actively committed.

We will achieve these goals together.

Dr. Alexandra Bendler
CEO RONAL GROUP
